

GLORY

A new generation of universal CMMs

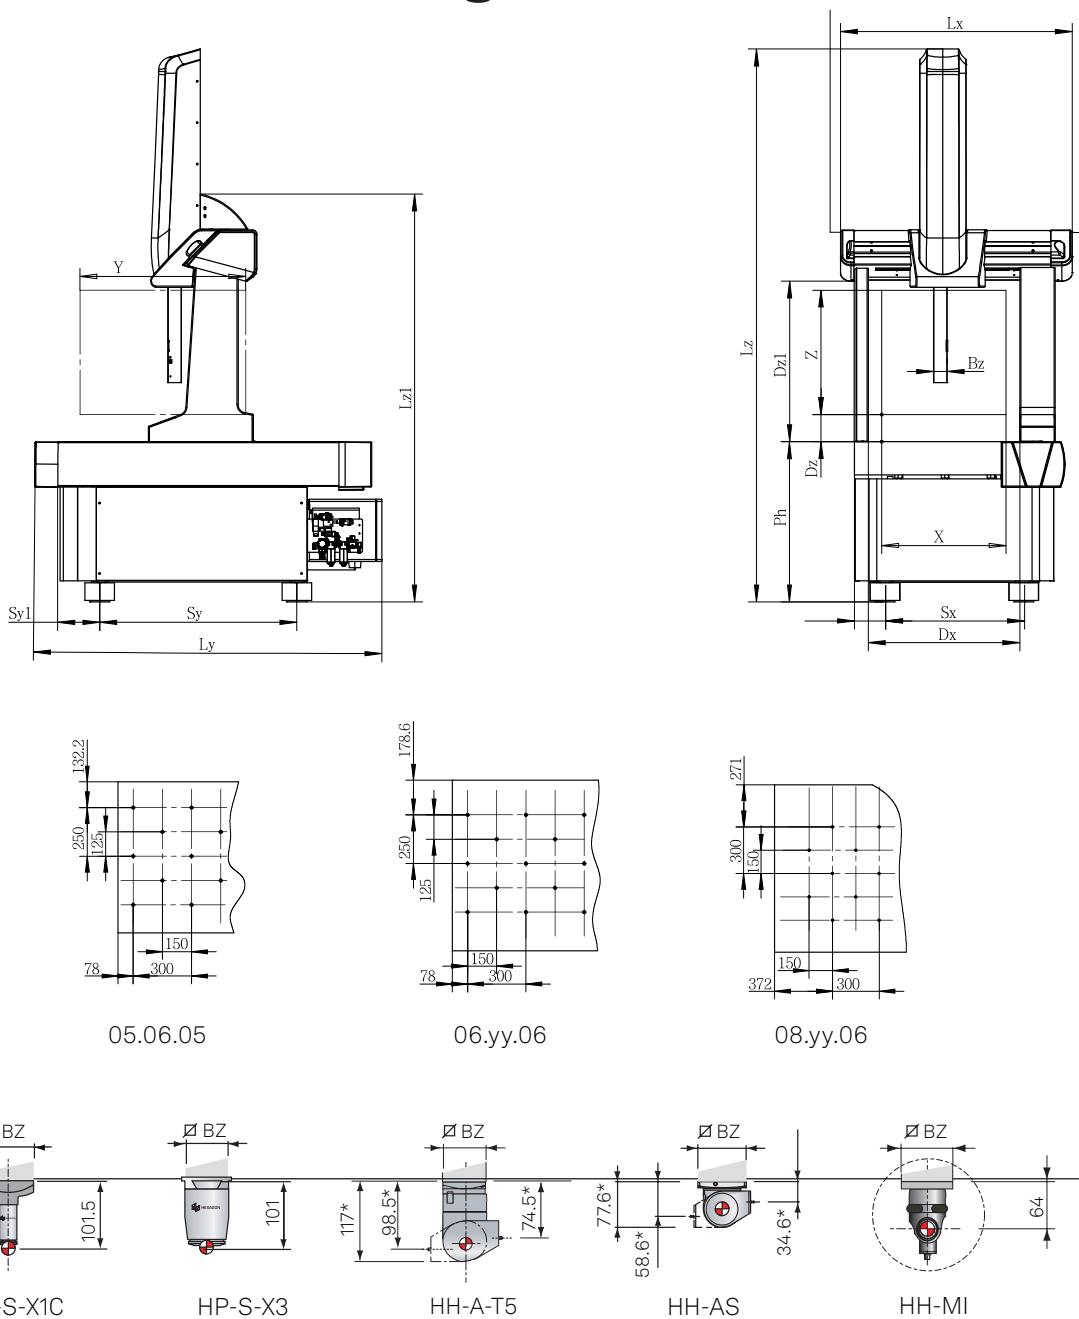

Meeting diverse user needs

The GLORY bridge coordinate measuring machine (CMM) is a new generation of universal measuring machine built upon Hexagon's innovative and advanced technologies,

user research and close customer collaboration. Its flexible design platform ensures that it can be configured to meet a wide variety of user requirements.

Dimensions and design

08.15.06	1464	2049

Technical specifications

Mechanical frame	X: Extruded hard alloy aluminum processed with precision and anodised Y: Integral granite platform Z: Extruded hard alloy aluminum processed with precision and anodised	
Surface plate	Material	Granite
	Workpiece fixation	M8X1.25 threaded inserts
	Flatness	According to DIN 876/II
Sliding system	Preloaded air bearings are used on each axis	
Measurement system	METALLUR® linear grating. System resolution: Touch 0.078µm; Scan 0.005µm	
Temperature compensation	Linear temperature compensation Scan : standard Touch: optional	
Ram counterbalance	Pneumatic balance, adjustable	
Electrical requirements	Power supply	220V - 50Hz
	Air supply	Minimum pressure 0.6MPA, air quality meets ISO 8573/1 standard level 4
Power consumption	Power	Touch: 1500VA / Scan: 2000VA
	Air supply	90 Nl/min
Operating environment	Temperature : 10°C - 45°C Relative humidity : 90% non-condensing	

Touch: measurement system configuration with HH-MI, HP-TMe, and HP-THDe sensors
Scan: measurement system configuration with HP-S-X1/X3, HP-C-TS5.10 sensors

GLORY Touch performance specifications

The performance indicators are based on ISO 10360-2:2009 and ISO 10360-5:2010 standards [E0/E150, PFTU, R0; L (mm)].

Model	Maximum Permissible Error MPE (μm), Maximum Permissible Repeatability Error MPL(μm)									
	HH-MI			HP-TMe			HP-THDe			
	E0/E150	PFTU	R0	E0/E150	PFTU	R0	E0/E150	PFTU	R0

Configuration of measuring probe during performance testing	
HP-S-X1: HP-S-X1S / HP-S-X1H / HP-S-X1C	Probe length 50 mm, tip diameter 5 mm
HP-S-X3	Probe length 60 mm, tip diameter 5mm

Performance indicators are valid under the following conditions	
Ambient temperature	18°C - 22°C
Maximum temperature variation	1°C/h - 2°C/24h
Maximum temperature gradient	1°C/m

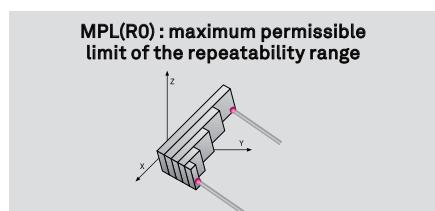

Performance evaluation criteria

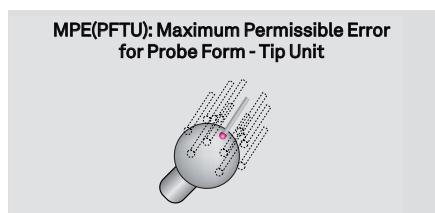

In the working space of the coordinate measuring machine, seven orientations are arbitrarily selected, and five length gauges are measured in each orientation. Each length gauge is measured point-to-point three times. The measurement results should not exceed the given MPE (E0) value.

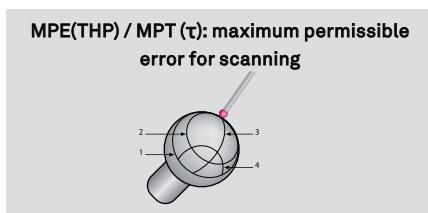

In the XZ or YZ plane of the coordinate measuring machine, select 2 diagonal directions, measure 5 length gauge blocks in each direction, and measure each length gauge block three times with the probe perpendicular to the Z axis and a bias length of 150 mm. The measurement results should not exceed the given MPE (E150) value.

Evaluate the repeatability (R0) by assessing the three-repeat precision of length measurement error (E0). For 35 measurements, each length measurement result of three repetitions should not exceed the given MPL(R0) value.

On the test sphere, 25 points are probed, and the maximum allowable shape error (PFTU) for a single probe is the range of variation in all radii, which should not exceed the given MPE (PFTU) value.

Perform high-density scanning measurements on a calibration sphere along four predetermined paths. The variation range of all scanning radii should not exceed the given MPE. The time required for the scanning measurement should also not exceed the given limit.

Note: The accuracy testing under maximum load according to ISO 10360-2 standard is only an option, and the performance evaluation of non-contact sensors should be carried out according to the corresponding ISO standards.

Probing specifications

	HH-A/AS8-T7.5°	HH-A/AS8-T5°	HH-A/AS8-T2.5°

Weight	300 g

Hexagon is a global leader in digital reality solutions, combining sensor, software and autonomous technologies. We are putting data to work to boost efficiency, productivity, quality and safety across industrial, manufacturing, infrastructure, public sector, and mobility applications.

Our technologies are shaping production and people-related ecosystems to become increasingly connected and autonomous – ensuring a scalable, sustainable future.

Hexagon's Manufacturing Intelligence division provides solutions that use data from design and engineering, production and metrology to make manufacturing smarter.
